INTRODUCTION

Compilation of this bibliography is intended to be a contributing resource in support of the “North American Otter Chronicles”. The Chronicles provide information on current and ongoing conservation and research initiatives on the three species of otters inhabiting North America. These three species are the sea otter (*Enhydra lutris*), North American river otter (*Lontra canadensis*), and the neotropical otter (*Lontra longicaudis*). Like the bibliographies compiled by this author on the North American river otter and the neotropical otter this bibliography was also compiled for (1) those undergraduates and graduates students searching for publications relative to a potential research project on the sea otter (*Enhydra lutris*), (2) independent scientists, with an interest in the sea otters, who do not have access to a library at a major university, and (3) those scientists planning to expand their scientific investigations on the sea otter.

The citations for this bibliography were acquired from many sources. These sources include key word internet searches plus the year of interest, e.g., “Enhydra lutris 2010” or “Enhydra lutris 2020”. Many citations were located in the literature cited/reference sections of publications on the sea otter. The seaotters.org website provided numerous citations from 2001 onward. Another valuable resource was the IUCN Otter Specialist Group Bulletin (*IUCN OSG Bull*) publications from 1986-2021.

A Bibliography on the Sea Otter (*Enhydra lutris*)
3rd Edition
Compiled by Victor L. Camp
(as of 24 Dec 2023)
